

ATLAS STRAPS

B-CLIP

G-HOOK

Stronger and much safer than a bungee, Oxford's Atlas Straps are adjustable self-tensioning straps. Their extra strong, flat webbed design is easy to adjust to the desired length and the quick release clips makes them simple to detach. The strap has an elasticated section which keeps the strap under constant tension providing a safer and more secure hold compared to regular solid straps.

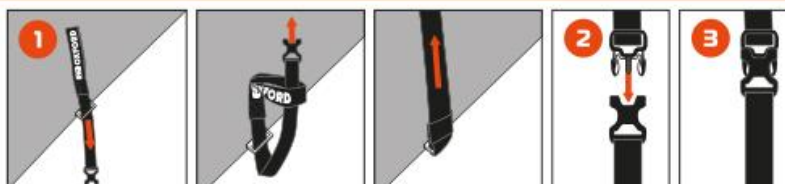

With a multitude of uses, your gear will stay safe and secure with Atlas Straps.
